Slides will be posted to our CBO Webpage

Poll and survey will be shown at the end of the webinar

Webinar recording will be posted to our CBO Webpage

# Agenda

## Welcome & Introductions

Lisa F. Waddell, MD, MPH

## Current CDC Recommendations

John T. Brooks, MD

## Test to Treat Initiative

Cameron Webb, MD, JD

## National Association of Community Health Center Insights

Julia Skapik MD, MPH, FAMIA

## Local Bright Spot: G.A Carmichael Family Health Center

Dr. James Coleman Jr.

## Audience Q&A

## Key Takeaways and Closing

Lisa F. Waddell, MD, MPH

# Speakers

## John T. Brooks, MD

Senior Science Advisor, **CDC Emergency COVID-19 Response**  
Chief Medical Officer, **CDC Division of HIV Prevention**

## Dr. James Coleman Jr

Chief Executive Officer  
**G. A. Carmichael Family Health Center**

## Julia Skapik, MD, MPH, FAMIA

Chief Medical Information Officer  
**National Association of Community Health Centers**

## Cameron Webb, MD, JD

Senior Policy Advisor for Equity, COVID-19 Response Team  
**White House**

## Lisa F. Waddell, MD, MPH

Chief Medical Officer  
**CDC Foundation**

# Current CDC Recommendations

**John T. Brooks, MD**

Senior Science Advisor | **CDC Emergency COVID-19 Response**  
Chief Medical Officer | **CDC Division of HIV Prevention**

# **The Who, What, Where and When of COVID-19 Treatments: Everything You Need to Know About Lifesaving Antivirals**

**John T. Brooks, CDC COVID-19 Emergency Response**

**CDC Foundation Call**

**June 28, 2022**

**[cdc.gov/coronavirus](https://cdc.gov/coronavirus)**

# COVID-19 Treatment Guidelines

Does Not Require  
Hospitalization or  
Supplemental Oxygen

All patients should be offered symptomatic management **(AIII)**.

For patients who are at high risk of progressing to severe COVID-19,<sup>a</sup> use 1 of the following treatment options:

## Preferred Therapies

*Listed in order of preference:*

- **Ritonavir-boosted nirmatrelvir (Paxlovid)<sup>b,c</sup> (AIIa)**
- **Remdesivir<sup>c,d</sup> (BIIa)**

## Alternative Therapies

*For use ONLY when neither of the preferred therapies are available, feasible to use, or clinically appropriate. Listed in alphabetical order:*

- **Bebtelovimab<sup>e</sup> (CIII)**
- **Molnupiravir<sup>c,f</sup> (CIIa)**

The Panel **recommends against** the use of **dexamethasone<sup>g</sup>** or **other systemic corticosteroids** in the absence of another indication **(AIII)**.

<https://www.covid19treatmentguidelines.nih.gov/management/clinical-management/clinical-management-summary/>

<sup>a</sup> CDC webpage for criteria of high risk; <sup>b</sup> Caution about drug-drug interactions; <sup>c</sup> If hospitalized, treatment course can be completed;

<sup>d</sup> Remdesivir is 3 consecutive day infusion; <sup>e</sup> Bebtelovimab has in vitro activity but no clinical efficacy data; <sup>f</sup> Molnupiravir has lower efficacy than preferred options; <sup>g</sup> There is currently a lack of safety and efficacy data using glucocorticoids in non-hospitalized patients

# Dosing Details

	Dosing	Duration	Time from Illness Onset	Specific Issues
<b>Nirmatrelvir (N) + Ritonavir (R)</b>	<ul style="list-style-type: none"> <li>• <i>eGFR</i> <math>\geq 60</math> mL/min: N 300 mg + R 100 mg po bid</li> <li>• <i>eGFR</i> <math>\geq 30</math> to <math>&lt; 60</math> mL/min: N 150 mg + R 100 mg po bid</li> </ul>	5 days	$\leq 5$ days	<ul style="list-style-type: none"> <li>• Drug-drug interactions</li> <li>• Do not use if GFR <math>&lt; 30</math> mL/min</li> <li>• Not recommended with Child-Pugh Class C</li> </ul>
<b>Remdesivir</b>	Day 1: 200 mg IV Day 2-3: 100 mg IV	3 days	$\leq 7$ days	<ul style="list-style-type: none"> <li>• Infusion over 30-120 min</li> <li>• Infusions over 3 consecutive days</li> </ul>
<b>Bebtelovimab</b>	175 mg IV	1 day	$\leq 7$ days	<ul style="list-style-type: none"> <li>• Administer <math>\geq 30</math> seconds</li> <li>• No clinical endpoint data</li> <li>• Use only if not other accessible or clinically appropriate options</li> </ul>
<b>Molnupiravir</b>	800 mg po bid	5 days	$\leq 5$ days	<ul style="list-style-type: none"> <li>• Potentially less efficacious than other options</li> <li>• Safety concerns</li> </ul>

# COVID-19 Rebound After Paxlovid Treatment

Distributed via the CDC Health Alert Network, May 24, 2022, 9:00 AM ET (CDCHAN-00467)

- Reports of recurrent illness a few days after Paxlovid™ treatment
- Manufacturer noted in the clinical trial that a small number of participants had  $\geq 1$  positive SARS-CoV-2 RT-PCR test results after testing negative, or an increase in the amount of SARS-CoV-2 detected by PCR (NP swabs) after completing their assigned treatment course in the study.
- This finding was observed *both* in persons randomized to Paxlovid™ and to placebo.
- There was *no* increased occurrence of hospitalization or death, and there was no evidence that the rebound in detectable viral RNA was the result of SARS-CoV-2 resistance to Paxlovid™

# COVID-19 Rebound After Paxlovid Treatment

Distributed via the CDC Health Alert Network, May 24, 2022, 9:00 AM ET (CDCHAN-00467)

- There is currently no evidence that additional treatment for COVID-19 is needed.
- CDC recommends re-isolating during the rebound
  - CDC Health Advisory: <https://emergency.cdc.gov/han/2022/han00467.asp>
    - Isolate again and restart the recommended 5-day isolation period at the time of recurrence of symptoms or a new positive COVID-19 test result.
    - End re-isolation after 5 days if you are fever-free for 24 hours without the use of fever-reducing medication and your symptoms are improving.
    - Wear a mask for 10 days after rebound.

For more information, contact CDC  
1-800-CDC-INFO (232-4636)
