

IS THERE A TREATMENT FOR COVID-19?

YES! IF YOU'VE TESTED POSITIVE FOR COVID-19 AND YOUR SYMPTOMS BEGAN IN THE PAST 10 DAYS, YOU MAY BE ELIGIBLE FOR A FREE TREATMENT CALLED **mAbs.**

WHAT ARE mAbs?

Monoclonal antibodies, or mAbs, are man-made proteins that help your body fight off the virus that causes COVID-19. In fact, just one mAb treatment can help keep you from getting sicker and going to the hospital.

ARE YOU ELIGIBLE FOR mAbs?

You may be eligible if you have tested positive for COVID-19, are 12 years of age or older (and at least 88 pounds), and are at a greater risk of developing severe COVID-19 symptoms. The list of high-risk characteristics and conditions has recently expanded to include many more people.* Talk to your doctor to confirm eligibility.

HOW THE TREATMENT WORKS:

mAbs are man-made proteins designed to fight off the virus that causes COVID-19. The infusion can take from 20 to 70 minutes, with an observation time afterward. You'll only need the treatment once. It's easy, safe, and authorized by the FDA.

HOW TO BOOK A TREATMENT:

Step 1: Test positive for COVID-19 within the last 10 days.

Step 2: Receive a referral from a healthcare provider.

Step 3: Book an appointment at a nearby infusion treatment center.

Treatment is free if you meet the requirements.
