

CMS PUSH TO ODMAP AND OTHER

When the data in the Medicolegal Death Investigation (MDI) Case Management System (CMS) indicates the death investigation meets the inclusion criteria for the Overdose Detection Mapping Application Program (ODMAP) (i.e., a trigger event), the CMS sends (pushes) the data to ODMAP through an Application Programming Interface (API).

KEY TERMS AND DEFINITIONS

SYSTEM FUNCTIONS

APPLICATION
PROGRAM INTERFACE
(API)

SYSTEM NAME

System Functions - Example User Interactions, not exhaustive.

Application Program Interface describes the functionality between systems. The API specification includes the data elements, security considerations, transport, etc. When a system receives/consumes updates additional system specific behavior may be initiated such as placing work in a work queue to notify someone of new activity.

System Boundary – A rectangle that contains the various system functions, including the parts of the API that each system is responsible for.

MDI represents the Medical Examiner, Coroner or other individuals in their office delegated to perform a particular use case. Some may only have access to limited functions.

ODMAP represents any individual with access to the platform at Washington/Baltimore High Intensity Drug Trafficking Agency (HIDTA).
