

DATA FOR HEALTH INITIATIVE

Program Overview

Today, approximately half of all deaths in the world go unrecorded without a cause. This means many health policy decisions are based on inadequate – or often, inaccurate – information.

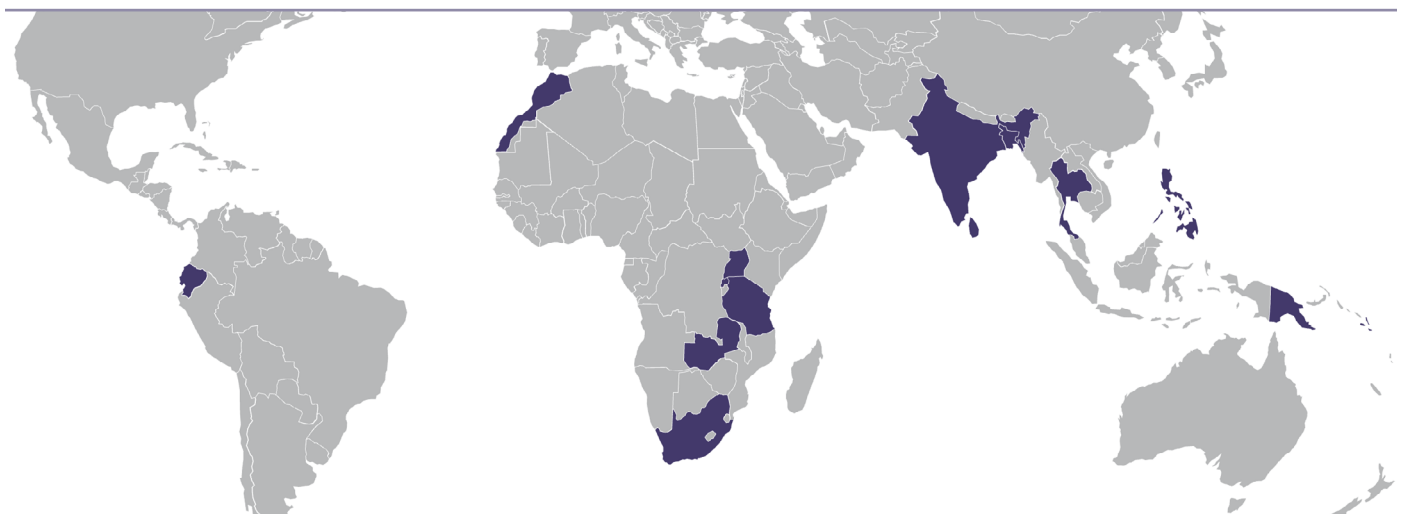

Bloomberg Philanthropies launched the Data for Health Initiative in 2015 to partner with low- and middle-income countries to collect more accurate public health data. The goal of the initiative is to strengthen data on births, deaths and risk factors for noncommunicable diseases (NCDs) so governments can save and improve lives through better-informed public health policies. The initiative has forged robust partnerships with governments and global organizations in more than 25 countries, in which all programs are led by country partners.

The CDC Foundation supports the following Data for Health Initiative key focus areas:

Civil Registration and Vital Statistics

Noncommunicable Disease Risk Data and Surveillance

Data Impact

COUNTRIES

Bangladesh	Solomon Islands
Ecuador	South Africa
India	Sri Lanka
Morocco	Tanzania
Papua New Guinea	Thailand
Philippines	Uganda
Rwanda	Zambia
