WAI
WORKFORCE ACCELERATION INITIATIVE
DATA & TECHNOLOGY

The Workforce Acceleration Initiative (WAI) is providing additional technology and data experts to help accelerate information system improvements in public health agencies (PHAs) across the United States. This is a breakdown of the types of improvements these experts will help implement across the 49 selected State, Tribal, Local and Territorial (STLT) PHAs.

PHAs WITH PROJECTS
IN EACH CATEGORY

23 System Improvement Plans
Developing and refining enterprise-wide systems improvement plans.

27 Data Governance
Planning and implementing public health data governance processes and procedures.

31 Automation & Software Improvements
Automating manual processes or upgrading existing systems.

25 Data Warehouse
Bringing public health datasets together in a shared space to simplify and improve data management, analysis, access and use.

14 Data Linking
Establishing ongoing processes to link datasets together to create more informative, comprehensive information.

24 Data Organization
Improving data organization by digitizing data, creating an inventory of data assets, setting standards, and establishing tracking and quality control processes.

37 Interoperability
Improving the ability of systems to interact and exchange information, internally or externally, with minimal human intervention (e.g., improvements to automation, data flows, standardization, etc.)

35 Data Access, Analysis & Use
Improvements in analysis, visualization and reporting of data, translating data into accessible health insights that inform action.
